

This game is for two to four players.

Materials needed: One container big enough to hold the sticks, 25 – 30 popsicle sticks

To make: Decide if you want to practice addition, subtraction, multiplication, or division.

Use a marker to write the problems of your choice on the popsicle sticks.

Ex. $6 \times 4 =$, $5 \times 3 =$, $7 \times 6 =$. Do not put the answer on the sticks. Write the word BANG on three of the sticks. Place sticks in the Pringle container.

To play: Players take turns drawing sticks out of the container.

They read off the problem and give the answer.

If they answer correct and the other players agree they keep the stick. If they answer wrong the stick is returned to the container.

If a player draws out BANG then they must return all of the sticks to the container. The winner is the person with the most sticks after a set amount of time.
